

COMPANY

TECNO VACUUM s.r.l. is a company that researches and develops high vacuum solutions for metallic coatings of objects.

The Company, which has a consolidated experience world-wide, designs and builds high vacuum metallization equipment since 1990 for the sectors of automotive, cosmetics and in general the ennobling of various objects.

With our second production site, we have an area of 15.000 mq in total and a covered area of about 6.000 mq for warehouses, workshop, technical and commercial offices.

- Thermal Evaporation
- Sputtering
- Cathodic Arc

Tecno Vacuum produces standard equipment available in stock and special equipment on request

TECNOMET COMBI MV
Vertical equipment, two doors, two magnetrons

TECHNOLOGY

- PVD (Physical Vapor Deposition):
 Thermal Evaporation, Sputtering, Cathodic Arc (Combinet)
- PLASMA (DC or MF)
 (activation and vacuum surface cleaning)
- PECVD (Plasma-enhanced chemical vapor deposition):
 PROTECTOR (vacuum polymerization, transparent organic coating)
- MULTILAYER DEPOSITION
 (Metals, metal alloys, nitrides and carbonitrides of Ti, Cr, Zr, etc...)
- AUTOMATIC CRYO TRAP WITH DEFROST DURING THE PRODUCTION CYCLE

 (LN2 or Polycold)
- THICKNESS GAUGES

 (automatic control of deposited film thickness)
- REPORT FOR EVERY PRODUCTION CYCLE
 (printouts with process graphics and traceability for each cycle)

Our machines are equipped with **energy management systems** to optimize the operation of pumping units and reduce the consumption of electrical energy.

Angle piston valves (low costs of maintenance, guaranteed for over one million movements without maintenance). Our exclusive technological systems, guarantee extremely short cycle times, such as the "**Diffusion Pump Speed**" system which allows the high vacuum valve to operate directly in the chamber.

The DPS system reduces the cycle time and allows longer maintenance intervals with considerable cost saving:

- diffusion pump oil change every 3 years
- diffusion pump internal cleaning every 6 years

New **control system** for constant and correct process operation managed by the control panel, which also it allows remote monitoring and technical assistance via internet in real time.

Self-diagnostic function: checking the proper functioning of pumps, valves and vacuum gauges, reporting anomalies and suggesting corrective actions.

Exploded view drawings of the main machine assemblies, complete of materials list and ordering codes. We use **dry rotary pumps**, standard on our equipment, with several advantages compared to traditional oil pumps:

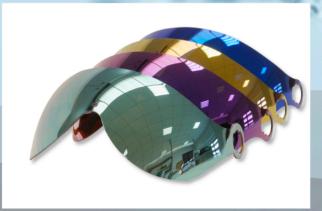

- Lower pressure level
- Low maintenance costs
- No oil consumption
- Lower noise

Tecno Vacuum s.r.l. is represented worldwide by agencies of commercial and technical assistance. Among the markets in which we operate: automotive, lighting, cosmetics, footwear, decorations, optics, fashion accessories, mechanics, electronics.

Our services include:

TECHNICAL ASSISTANCE

- Remote assistance on-line
- Assistance at custumers from various centers of the world
- Software updates
- Ordinary assistances programmed
- Timely extraordinary assistances
- General overhauls at our or your site
- Encoded spare parts service (always in stock)
